

GreenLight™

Server Infrastructure Optimization, Monitoring, Charting & Reporting

Monitoring and Alerting

- **Works for any network service:**
Domino / Sametime / Quickr / Traveler, Blackberry Enterprise Server, generic SNMP / TCP / UDP, ...
- **Automated infrastructure surveillance:**
database and server performance, mail- and replication analysis, and more
- **Flexible alerting and actions**
ranging from simple mail alerts to restarting tasks or entire servers

Charting and Reporting

- **Powerful custom charts** in a user friendly interface
- **SLA compliance**, cluster analysis, optimization suggestions, and many more pre-configured reports
- **Historical data** for drill-down analysis
- **Visualization of the server topology** with in-depth information about traffic volumes and data flow
- **Integration of client analysis data** offers a revolutionary approach to security and performance audits

Facts and Architecture

- Up and running in half an hour - turnkey virtual software appliance (Linux / VMWare)
- Agentless software, no installations required on monitored servers
- No limitations to statistics collection or storage time period
- Available as SaaS in the Cloud
