

Name Changes through Flexible Mass Modifications without Headaches

Fast and Flexible Name Changes

- **Automatically replace name values** in any text, author, name, ACL, RichText or reader field or profile document
- **Modify** the contents of databases **securely**, without having access to its structure
- **Edit or add** an entire name, partial name, OU, custom pattern or formula language
- **Edit names in all documents** in a database **or create a filter** to only consider certain documents
- **Select one or several databases** to be analyzed on servers
- **Set roles** in an application for selected entries
- **Create new fields using a predefined pattern or formula language**

Benefits

- **Avoid recertification or merger headaches**
- **Make name changes securely** while retaining field types
- **Log all changes** and back out of previous changes for increased flexibility

Facts and Architecture

- Notes database template with background agent
- Runs on **Windows, Citrix, Linux and Mac OS**, without server tasks
- Can be run on either Notes clients or Domino servers

Name:	Example Replace Company
Status:	no
Servename:	DominoNTZ1
Documents:	<input checked="" type="radio"/> all <input type="radio"/> formula
