

Notes2Web™

75% Automated Web-Enablement of IBM Lotus Notes Applications

Comprehensive and Highly Automated Conversion

- „Automatically“ adds a web UI to your existing applications
- **Copes with problematic elements** that Lotus Domino does not display in web browsers, such as picklists, date picker and UI code
- **Can make use of XPages and custom controls** or convert an application using traditional web elements
- **Automatically creates standardized code** without affecting the application in Notes

Benefits

- Reduces web enablement efforts and time investment by **up to 75%**
- **Prevents mistakes** from programming and architecture mistakes
- **Hybrid use of applications** in Notes clients and web browsers
- **Adds J2EE and Web 2.0 technologies** to your existing applications
- **Takes your applications to the cloud** via web browser

Facts and Architecture

- Notes database template
- Runs on **Windows, Citrix, Linux and Mac OS**, without server tasks
- Independent of Notes/Domino release
